

Design and develop a basic react web application for Student's Admission. The website should contain following features. Use Context / Redux for data flow.

Tabs: Home, Admission, Applicants, Search Bar

Home: For information of the school.

Admission: This tab is for admission form. The admission form should have following input fields and submit the form with alert notification. Additionally, give another option to cancel the form.

1. First Name (Only Capital Case Characters,)
2. Last Name (Only Capital Case Characters)
3. Gender (Drop Down List)
4. Last pursued Class (Drop Down List up to 1 to 12)
5. Want to pursue (Drop Down List up to 1 to 12, sorted by input field 4)
6. Phone Number along with option of dropdown country code (only 10-digit phone number, No Characters)
7. Country (selected by country code)
8. Email Id (give a note on placeholder and validate by @xyz.comx)
9. Address (resizable)
10. Date (calender)

Applicants: List of all applicant who have submitted the admission form. Additionally, give an option to delete or cancel the form and this deletion will be protected by password that is "asdFg". After clicking over the particular applicant's section, all information of the applicant will be visible nicely. And also, there will be the deletion functionality to trigger the parent's functionality.

Search Bar: To search any applicants by name.
